

- I. Fundamentals
 - A. Stern Gerlach Experiment
 - B. States, Operators and Hilbert Space
 - i. Dirac Notation
 - ii. Matrix Representation of operators
 - iii. Change of basis
 - iv. Eigenvalue problems
 - C. Measurements and Observables
 - i. Measurements, Expectation Values
 - ii. Uncertainty Relations
 - D. Examples
 - i. Two level system, spin 1/2
 - ii. Position, Momentum, Translation
- II. Quantum Dynamics
 - A. Time Evolution Operator
 - B. The Hamiltonian
 - i. Canonical Quantization
 - ii. Ehrenfest's theorem
 - iii. Schrödinger Equation
 - C. Schrodinger vs Heisenberg Pictures
 - D. Examples
 - i. Spin 1/2, spin precession, NMR
 - ii. 1D Potential Problems:
 - Delta function potential
 - Step and square well Potential
 - 1D scattering and bound states
 - iii. Harmonic Oscillator
 - a. Wavefunction
 - b. Raising and Lowering Operators
 - c. Heisenberg Operators
 - d. Coherent States, Classical Limit
 - iv. Particle in electromagnetic field.
 - a. Canonical Momentum
 - b. Gauge Transformations
 - c. Landau Levels
 - d. Aharonov Bohm effect
 - E. Feynman Path Integral
- III. Rotations, Angular Momentum and Spin
 - A. Rotations and Generators
 - B. Eigenstates of Angular Momentum
 - C. Representations for $J=0, 1/2, 1$
 - D. Spherical Harmonics
 - E. Representations of Rotation Group
 - F. Addition of Angular Momentum
 - G. Tensor operators
- IV. Quantum Measurement Theory
 - A. Density Matrix: Pure, Mixed Ensembles
 - B. Entanglement and Decoherence
 - C. Quantum Computation
 - D. Quantum Cryptography, Teleportation
- V. Symmetry In Quantum Mechanics
 - A. Continuous symmetries: Conservation Laws and Degeneracies
 - B. Discrete Symmetries
 - i. Parity
 - ii. Time Reversal, Kramers' degeneracy
 - iii. Lattice Translation, Bloch's thm.
- VI. Approximation Methods
 - A. Time Independent Perturbation Theory
 - i. Non Degenerate
 - ii. Degenerate
 - iii. Stark Effect
 - iv. Fine Structure of Hydrogen
 - B. Time dependent perturbation theory, Fermi's golden rule
 - C. Variational Methods
 - D. Semiclassical limit, WKB approx.
 - E. Adiabatic limit, Berry's phase
- VII. Many Particle Systems
 - A. Exclusion Principle, Spin and Statistics
 - B. Two Electrons: Helium
 - C. Atoms, periodic table, Hund's rules
 - D. The chemical bond
- VIII. Scattering Theory
 - A. 3D Central Potentials
 - B. Partial Waves, Phase Shifts
 - C. Born Approximation
 - D. Lippman Schwinger Equation, T matrix
 - E. The S Matrix
- IX. Radiation
 - A. Quantization of Radiation Field
 - B. Coupling of Radiation to Matter
 - C. Spontaneous Emission
 - D. Stimulated Emission
